

## Daily evidence digest

4 August 2021

The daily evidence digest collates recently released reports and evidence – provision of these links does not imply endorsement nor recommendation.

### Behavioural nudges to increase COVID-19 vaccination, mass vaccination and lockdown requirements, interpreting time series of COVID-19 data

#### Peer reviewed journals featured:

- Two randomised controlled trials of behavioural nudges to increase COVID-19 vaccination [here](#) and associated commentary [here](#)
- A modelling study on the effect of mass-vaccination on lockdown requirements in Australia [here](#)
- Observational studies on:
  - Interpreting time-series of COVID-19 data [here](#)
  - Anti-CD20 therapies and SARS-Cov-2 antibody responses in patients with multiple sclerosis or neuromyelitis optica spectrum disorders [here](#) and associated editorial [here](#)
  - The incremental value of CT scans in predicting COVID-19 ICU admission [here](#)
- A case report on malignant cerebral infarction after AstraZeneca vaccination [here](#)

#### Letters and correspondence discussed:

- Antibody response to SARS-CoV-2 among individuals with IBD diminishes over time [here](#)
- Time of day influences immune response to an inactivated vaccine against SARS-CoV-2 [here](#)

#### Pre-peer review articles featured:

- COVID-19 vaccination information and health literacy [here](#)

#### News and blogs

- Most patients in England received good or excellent care in hospitals [here](#)
- Delta infections threaten herd immunity vaccine strategy [here](#)
- Flawed ivermectin preprint highlights challenges of COVID-19 drug studies [here](#)
