

Daily evidence digest

13 October 2021

The daily evidence digest collates recently released reports and evidence – provision of these links does not imply endorsement nor recommendation.

Digital contact tracing, effect of mandatory COVID-19 certificates on vaccine uptake, WHO international travel public health measures

Peer reviewed journals featured:

- An observational study on digital contact tracing in Norway [here](#)
- Commentary on clinical and public health implications of SARS-CoV-2 immunology [here](#)

Letters and correspondence discussed:

- Neutralisation resistance of Delta variant sub lineages [here](#)
- COVID-19 vaccination and immunomodulatory or immunosuppressive drugs [here](#)
- Cross-neutralisation of SARS-CoV-2 variants by sera from convalescent COVID-19 patients [here](#)

Pre-peer review articles featured:

- The impact of mandatory COVID-19 certificates on vaccine uptake [here](#)
- The impact of heating, ventilation, and air conditioning design features for mitigating virus transmissions and COVID-19 [here](#)
- A phase 3 trial of Novavax vaccine in adults in the United States and Mexico [here](#)
- The impact of vaccination on the risk of severe forms of COVID-19 [here](#)

Guidance and reports

- The World Health Organization published an operational framework for international travel-related public health measures during COVID-19 [here](#)

News and blogs

- Antibody levels fall after second Pfizer dose, but protection against severe disease remains [here](#)
- Sweden, Norway, and Finland suspend use of Moderna vaccine in young people [here](#)
- New Zealand's switch in policy [here](#)
