The daily evidence digest collates recently released reports and evidence – provision of these links does not imply endorsement nor recommendation.

Anakinra, screening in asymptomatic individuals, effect of vaccination on symptoms of post-acute COVID-19 syndrome

Peer reviewed journals featured:

- An updated systematic review on anakinra in hospitalised COVID-19 patients [here](#)
- A narrative review on neurological and neuropsychiatric complications of SARS-CoV-2 vaccines [here](#)
- Randomised clinical trials of:
 - Therapeutic versus prophylactic heparin in moderately ill COVID-19 patients [here](#)
 - Convalescent plasma in critically ill COVID-19 patients [here](#)
 - The MVC-COV1901 protein vaccine in a phase 2 trial [here](#)
- Observational studies on:
 - Screening for SARS-CoV-2 infection in asymptomatic individuals [here](#)
 - Early second PCR test and risk assessment for severe COVID-19 [here](#)
 - Effect of Delta variant on viral burden and vaccine effectiveness in the UK [here](#)

Letters and correspondence discussed:

- Administration of monoclonal antibody for COVID-19 in patients' homes [here](#)

Pre-peer review articles featured:

- Effect of SARS-CoV-2 vaccination on symptoms of post-acute COVID syndrome [here](#)
- Effectiveness of one-shot immunisation with Sputnik Light against Delta variant [here](#)

Guidance and reports

- An update to the BMJ Best Practice guidance for COVID-19 [here](#)

News and blogs

- COVID-19 vaccination uptake in children, adolescents, and young adults in the UK [here](#)
- COVID-19 precautions help make music safe [here](#)
- SARS-CoV-2 transmission and intranasal vaccines [here](#)
