Long-term follow-up of recovered patients with COVID-19

COVID-19 is a new disease and uncertainty remains regarding the possible long-term health effects. This is particularly relevant for patients with severe symptoms, including those who required mechanical ventilation during their hospital stay.

THE LANCET

What Is The Diagnosis?

A 37-year-old man presented with a 14-month history of painful, thickened, and cracked skin on the fingertips of both hands. He also had low-grade fevers and muscle weakness.

What is the diagnosis?

What's in naming a strain?

As more variants are emerging around the world, what are the methods used to name a strain?

Does a committee decide? Should we let the public choose?

Community awareness of speech pathology: A regional perspective

Speech pathology has a history of low public awareness and in the absence of current research it is unclear if community awareness has changed in recent years.

This study aims to explore a regional community's awareness of speech pathology as the impetus for considering future directions pertaining to awareness and understanding
