## What is the diagnosis?

These small pigmented nodules in the iris are detectable from 3 years of age and are found in most adult patients.

What's the diagnosis?

## Why Use PubMed?

PubMed contains not only Medline, but a range of extra content as well. It was created to make Medline more accessible to those with no medical background, so it translates and expands search terms to find extra information.

PubMed Clinical Queries can help you find evidence-based information on specific clinical questions.

If you are not confident with database searching you may find PubMed easier to use.

Speak to your [local librarian](#) for advice on how to search PubMed effectively.

PubMed is also getting a new look with a more responsive design and enhanced search features. Be sure to [check it out on May 18](#).

## Alcohol and fast food sponsorship in sporting clubs

As more and more alcohol and fast food companies sponsor junior community sporting clubs, this study aims to find the association and attitudes from parents towards increased exposure and health risks.
